vacation, you will also be able to see how your organization works and meet the people who help to run it. Please remember that this is for all members and not just the Chapters. We would very much like to have a large number of members at large on hand too. This is your opportunity to help make the laws and rules, you can do so by attending and exercising your right to vote on all important matters.

Again, I would like to express my deepest gratitude to all those who have helped me during the past year. It has indeed been a great honor and pleasure for me to serve you.

May the good Lord look on all you love, tenderly, today.

Sincerely,
Rosalie Wylie

OFFERING

THOUSANDS OF NEW GRAFTED HIBISCUS
IN BUD AND BLOOM

THESE ARE CAREFULLY SELECTED, EXOTIC AND
CHOICE HIBISCUS.
GROWN IN STERILE SOIL
WE KNOW WHAT WE HAVE AND WHERE
IT IS LOCATED

Variety list available

US 441 on
Clarcona road

PLANTING

Remove plant from container without disturbing the root system. Have hole dug twice as wide as plant, and again as deep. Have soil mix prepared of 1/3 peat, 1/3 cow manure and balance of sand and small oak leaves. Plant no deeper than grown in can. Pie crust top soil to retain water and fertilizer. Use modest handful of 6-6-6 organic and water in well. Hibiscus prefer full sun, if not possible, partial sun.

FERTILIZING

March 20th, cut back plants to shape and create new branching. Cultivate soil and use 6-6-6 organic and cow manure. Water in well. April and May use 6-6-6 organic. June, July and August, use 4-6-8 organic to size bloom. September and October use 0-10-10 to harden wood for winter. All fertilizer should have trace elements if obtainable.

INSECTS

For aphis, worms and small grasshoppers use Isotox, one tablespoon to one gallon of water. Spray on and underneath foliage twice a month during the morning hours. Be sure plant has been watered at least 24 hours preceding spraying.

COLD WEATHER CARE

On cold warning, if plant is in good foliage, water in well before cold, and hill plant up high, well above graft, with soil, with hill having a flat top for warmth. Should prolonged warm period follow, remove hill and repeat at next cold. If plant has lost foliage by frost or wind burn, refrain from watering. Under normal conditions it is preferable to leave plant exposed to circulating air cover. If plant is well covered with foliage and frost is anticipated, which normally forms an your before sunrise, sprinklers may be used until after frost ceases to form as water will be 72 degrees and frost may form under certain conditions with temperatures up to 42 degrees.
